Re: Application No. 10/075,221

Filing date: 11/25/2002

Inventor: Edward Ludwig Blendermann

Examiner: John P. Lacyk

Art Unit: 3736

Attn: John P. Lacyk

In response to the office action dated 10-19-2004 please accept the following reply.

The specification is directed to a nutritional supplement that emits electromagnetic that stimulate the body. The specification (page10) list several herbs, vitamins, ect. that are used as supplements. The examiner states that in view of contemporary knowledge in the art it is not well known that herbs, vitamins, ect. emit any type of electromagnetic waves and applicant has provided no evidentiary basis to support his theory.

The applicant traverses and reiterates that it is well known according to contemporary knowledge in the arts that electromagnetic waves are emitted by all matter with a temperature above absolute zero. All matter includes nutritional supplements.

To support the existence of this well known contemporary knowledge in the arts, the applicant offers the following referenced evidence.

1. Physical Geography.net ,Chapter 6-study guide states” A few physical laws can describe the nature of electromagnetic radiation.. One of these laws suggests that any object above the temperature of absolute zero emits radiation to its surrounding environment “.The glossary of terms from this web site defines electromagnetic radiation as ”Emission of energy in the form of electromagnetic waves .All objects above the temperature of absolute zero radiate energy to their surrounding environment.”

2. (.<http://www.astr.cwru.edu/jeffk/astro204/sept16dlf>) Thermal Emission

“All atoms vibrate, even if they are just above absolute 0 K.

Matter is made up of atoms which contain negatively charged electrons and positively charged protons.

Vibrating charges produce oscillating electric fields and thus electromagnetic waves.”

3. (<http://www.ldeo.columbia.edu/edu/dees/ees/climate/lectures/energy/generation.html>)

Generation of Electromagnetic Waves

“Electromagnetic waves are generated by moving electrons. An electron generates an electric field which we can visualize as lines radiating from the electron...If the electron moves, say vibrates back and forth, then this motion will be transferred to the field lines and they will become wavy....In turn, the moving electron generates a magnetic field that will also become wavy from the motion of the electron. This kind of wave is called an electromagnetic wave and light is such a wave. Since all matter contains electrons and all these electrons are in motion, as are the atomic nuclei they spin around, all matter generates electromagnetic waves.....”

“Electromagnetic (EM) radiation is emitted by all matter and consists of orthogonal electrical and magnetic waves. All EM travels at the same speed through a vacuum (186,000 miles per second or 300,000 kilometers per sec). This radiation is generated by a moving charge or charges. All matter consists of atoms in motion and these in turn consists of positively charged protons surrounded by a cloud a negatively charged electrons. The vibrating motion of the atoms causes the cloud of electrons to oscillate and this oscillation generates electromagnetic radiation.”

4.” The electromagnetic spectrum is a continuum of electromagnetic wavelengths. All matter radiate electromagnetic energy of varying wavelengths according to their temperature.”

(<http://www.geog.ucsb.edu/~jeff/115a/remote-sensing/remotesensing.html>)

5. (Encyclopedia Britanica, Vol.18-196:4A , 2002) “Continuous spectrum of electromagnetic radiation. Such spectra are emitted by any warm substance. Heat is the irregular motion of electrons, atoms, and molecules; the higher the temperature, the more rapid is the motion.. Since electrons are much lighter than atoms, irregular thermal motion produces irregular oscillatory charge motion which reflects a continuous spectrum of frequencies. Each oscillation at a particular frequency can be considered a tiny antenna that emit and receives electromagnetic radiation.”

6. (<http://www.school-for-champions.com/science/emwaves.htm>) Sources of electromagnetic radiation “Electromagnetic radiation is emitted from all matter with a temperature above absolute zero.”

The examiner must now be persuaded in the light of the above evidence that it is well known in contemporary knowledge that all matter including nutritional supplements emit electromagnetic waves.

With regard to claim 18, according to my records the clean copy and marked up copy are identical as they should be since the marked up copy is marked (original).

It reads "A method of improving muscle strength and endurance while conducting physical activities (exercise) by wearing the nutrient holding device during such activities."

This is the correct version. I hope this clears up any ambiguity.

Thank you for your consideration.

Sincerely,

A handwritten signature in black ink, appearing to read "Edward L. Blendermann", with a long horizontal flourish extending to the right.

Edward L. Blendermann

Re: Application No. 10/075,221

Filing date: 11/25/2002

Inventor: Edward Ludwig Blendermann

Examiner: John P. Lacyk

Art Unit: 3736

Attn: John P. Lacyk

The following is a copy of my records indicating that claim 18 in the marked up version
is identical to claim 18 in the clean version.

Sincerely,

A handwritten signature in black ink, appearing to read "Edward L. Blendermann". The signature is fluid and cursive, with a long horizontal stroke extending to the right.

Edward L. Blendermann
